Dayton International Airport to Unveil New AI Parking Technology with Metropolis

Seamless Drive In, Drive Out Technology Allows Passengers to Save Time, Reserve Parking and Pay in Advance

Dayton, OH – March 20, 2025 – Dayton International Airport (DAY) is proud to announce its partnership with Metropolis to implement its seamless drive-in, drive-out technology and comprehensive parking management services. This collaboration will enhance the travel experience for thousands of passengers who pass through the airport each day.

“We’re so pleased to launch these new innovative services allowing our valued travelers the ability to just drive in and drive out, saving them valuable time and helping make their journey as smooth as possible,” said Gil Turner, Director at Dayton International Airport. “This partnership marks a significant milestone in airport innovation and ensures that DAY remains at the forefront of both passenger-centric services and technological advancement.”

The new services, operated by Metropolis, mean that upon arrival, passengers simply register by scanning a QR code and manage the process effortlessly through the Metropolis application. Travelers won’t have any more paper slips or lost tickets, just a seamless parking experience. To reserve and pay for parking in the garage, short-term, long-term, economy, overflow, or cellphone lot, you can log on at www.flydayton.com/parking. Guests can modify or cancel their parking up to two hours before their scheduled arrival time.

“At Metropolis, our mission is to provide frictionless payment experiences to all consumers, saving them their most precious resource: time,” said Alex Israel, CEO and co-founder of Metropolis. “By combining our cutting-edge technology with DAY’s commitment to excellence, we are redefining the traveler’s journey – reducing wait times and enhancing convenience, ensuring a smooth, stress-free experience that sets the tone for their entire trip.”

Located near the “Crossroads of America,” DAY has experienced a continued increase in passenger boardings for the fourth consecutive year in 2024. This sustained growth cements its critical role as a key hub for both business and leisure travelers. Embracing its rich heritage as the birthplace of Aviation, DAY continues to embrace innovation by being one of the first airports in the United States to adopt Metropolis’ world-class technology.

Metropolis is reimagining the passenger experience with its advanced AI and computer vision capabilities. The centralized platform not only simplifies operations but also delivers unprecedented visibility into critical data and revenue streams, offering measurable value to its airport partners. Following last year’s acquisition of SP+, Metropolis is building on its impressive legacy of operating mobility and baggage services for more than 80 additional airports. Dayton International Airport is the second airport in the United States to install Metropolis drive in, drive out seamless parking technology after its rollout at San Antonio International Airport last year.

About Metropolis

Metropolis is an artificial intelligence company whose computer vision platform enables checkout-free payment experiences for the real world. Continuing its trajectory as one of the fastest-growing technology companies in the United States, Metropolis envisions a future where people transact in the real world with even greater ease than experienced online. Following its take-private acquisition of SP+, Metropolis is now the largest parking network in North America with more than 4,000 locations. Its proprietary, artificial intelligence technology is deployed across the United States, reaching more than 50 million customers and processing over \$5 billion in payments a year.
